

Tutorial Clarity - Multi-Voice Quick Start

In 5 Steps:

1. **Load video** — Paste YouTube URL
2. **Detect speakers** — Click “ Detect Speakers with AI”
3. **Verify** — Check speaker distribution in console
4. **Generate** — Click “Apply & Regenerate Audio”
5. **Play** — Click “ Play Clarified Audio”

Voice Assignment

Speaker	Default Gender	Voice
Speaker 0	Female	Nova
Speaker 1	Male	Onyx
Speaker 2	Female	Shimmer

You can change genders in the Speaker Voices panel before regenerating.

Test Tool

Use “ **Test Audio Blobs**” to preview first 5 segments before full playback.

Buttons

Button	What it does
 AI Detection	Best accuracy (uses AssemblyAI API)
 Manual Detection	Fast, less accurate (gap-based, no API)
 Test Blobs	Preview first 5 segments with voice info
 Nuclear Clear	Start over (clears all cached audio)

Console Messages to Watch For

-  Labels still preserved — Speaker labels survived React re-renders
-  Multi-voice confirmed — Multiple distinct voices in generated audio
-  All speaker_0 — Problem: all segments same speaker
-  PLAY ...  — Correct voice playing for segment

- [▶ PLAY] ... ❌ MISMATCH — Wrong voice playing (report this!)
